

BRADLEY LASKEY

FULL STACK DEVELOPER

0482 778 566 | bradley.laskey1990@gmail.com | Melbourne, VIC

Relocating to Sydney, NSW | No relocation assistance required

PROFESSIONAL SUMMARY

Full Stack Developer with five years of commercial experience building and supporting production business systems using TypeScript, React, Node.js and SQL. Delivered a customer finance portal for more than 5,000 users, developed features in a custom CRM, and shipped an LLM-assisted sales workflow. Experienced in authentication and RBAC, third-party integrations, database-backed applications, financial calculations, CI/CD, Docker and Azure.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, SQL, Python, Bash, PowerShell

Front End: React 19, Next.js, Redux Toolkit, Qwik, MUI, Tailwind CSS, HTML, CSS

Back End and APIs: Node.js, Express.js, ElysiaJS, REST APIs, GraphQL, webhooks, authentication, RBAC

Databases: PostgreSQL, Supabase, MSSQL, MySQL, MongoDB, Prisma, TypeORM, Drizzle, row-level security

Cloud and Delivery: GitHub Actions, CI/CD, Docker, Azure Container Apps, infrastructure as code, Linux, Vitest

PROFESSIONAL EXPERIENCE

Inside Edge Novated Leasing | South Melbourne, VIC

December 2021 - April 2026

Full Stack Developer

- Designed and delivered AutoDash, a React 19, TypeScript, Node.js/Express and MSSQL customer finance portal, owning requirements, database and application architecture, deployment and production support; shipped in eight months.
- Migrated more than 5,000 customers from an undocumented legacy platform and introduced email-based login, real-time lease balances, expense and budget visualisations, claims tracking, document access, notifications and customer messaging.
- Implemented a staged credential migration that verified each customer's legacy SHA-1 password at first login and immediately replaced it with an Argon2 hash, preserving access while moving users to stronger password protection.
- Inherited, maintained and expanded Torque, a custom React/Redux, Express.js and MSSQL CRM used for leads, communications, callback reminders and lease workflows across sales, operations, marketing and management reporting.
- Integrated Torque with Microsoft Teams for live pipeline updates and automated GST, FBT, tax and financial reporting across the lease lifecycle.
- Shipped an LLM-assisted sales workflow using Qwik, ElysiaJS and MongoDB that extracted structured novated-lease requirements from conversational text and recordings for financial estimates and quotes, allowing agents to focus on customers rather than manual note-taking.
- Built and supported production REST APIs, third-party integrations and webhooks across internal and external systems, including HubSpot and Calendly, while working within the constraints of two disconnected legacy platforms.
- Traced two calculation failures across undocumented systems after electric-vehicle tax exemptions were introduced, then updated vehicle classification and calculation paths so the new rules could coexist with existing financial logic.
- Managed CI/CD across three production systems using GitHub Actions, Docker and Azure; remediated vulnerabilities and supported critical incident recovery, including restoration following a ransomware event.

Solar Service Group | Box Hill, VIC

November 2020 - November 2021

Front End Developer

- Built and maintained React and TypeScript analytical dashboards, data visualisations and automated reporting tools for sales performance, team engagement and operational decision-making.
- Designed sales and operations planning processes and automated reporting with Python, Pipedrive and Zapier, contributing to a 27% increase in monthly battery installations.
- Expanded dashboard access and introduced push notifications so distributed sales teams could monitor performance metrics in real time.

Solar Service Group | Box Hill, VIC

July 2018 - November 2020

Campaign Strategist

- Planned and evaluated sales campaigns across five teams of ten, using performance data to refine targeting, messaging and conversion activity with cross-functional stakeholders.

Solar Service Group | Box Hill, VIC

March 2017 - June 2018

Team Leader

- Led a sales team of 11, coached staff and coordinated daily operations to meet performance targets.

iSelect | Cheltenham, VIC

January 2014 - December 2016

Health Insurance Sales Consultant

SELECTED PROJECT

Access Control Portfolio Application | *Personal project*

- Built a live Next.js, TypeScript, Tailwind CSS, Supabase and PostgreSQL application that lets reviewers use different roles and authorization levels within an invitation-gated demonstration environment.
- Implemented server-side access controls, PostgreSQL row-level security, automated tests and containerised deployment to Azure Container Apps using infrastructure as code and GitHub Actions.

EDUCATION

Certificate IV in Cyber Security

February 2022

Melbourne Polytechnic
